## AVI-SPL's Control Room Group to Exhibit at TechAdvantage 2010

*CRG to Spotlight the Utility Control Room in a Box (CRiB) at Booth 250*

**TAMPA, Fla. Feb. 9, 2010** – AVI-SPL's Control Room Group (CRG) today announced it will exhibit at TechAdvantage 2010 Conference and Expo, which will be held at the Georgia World Congress Center, Atlanta, Ga., Feb. 12-15. The Control Room Group specializes in the design, integration and support of the 24/7/365 mission critical control centers used in the electric utility industry.

Exhibiting in Booth 250, the Control Room Group will demonstrate the Control Room in a Box (CRiB). The system uses standard off-the-shelf components and can be custom designed to meet the unique requirements of the control center staff. The CRiB meets all NERC, FERC and CIP requirements, is affordable, scalable and can be installed in less than one day. The CRiB includes a large screen display system to ensure situational awareness, primary and secondary monitors, video processing, a human machine interface (HMI), an operator console and an intensive use chair.

"The Control Room Group looks forward to introducing the Rural Electric Coop industry members to the CRiB," said David Jones, sales manager, AVI-SPL's CRG. He continued, "The CRiB offers the cooperative member an affordable way to upgrade the control center's situational awareness capabilities all the while increasing the efficiency and productivity of the operations staff. Because of the ongoing budget constraints and constant technological advances, the CRiB was created to be affordable and scalable. It will fit the budget now, and as your technology requirements grow, the CRiB will grow along with them."

According to the TechAdvantage web site, the conference is the premier event for electric cooperative engineering, operations, information technology, purchasing and supply management professionals, providing educational sessions, a hands-on expo and peer discussion forums.

## About Control Room Group

The Control Room Group (CRG), a division of AVI-SPL, designs, integrates, installs and supports mission critical control room facilities in the utility industry. The CRG is expert at creating a custom system specifically designed to meet the unique requirements of your business using common off the shelf components. Unique to the industry the CRG works exclusively in the control room market and maintains a full time staff of certified project managers, project engineers and installation technicians. Regardless of the size of the control center, CRG system designs maximize functionality; enhance situational awareness and increase efficiencies of the control room staff.
